DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 2. Claim 1 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants' use of de-ionized water is the only solvent to dissolve the salts and the claims should be directed to this solvent.
- 3. Claim 26 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Note a spelling error line 8.

Claims 1-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japan 01-276142 or GB 2052081 in view of Ferrar et al. Applicants' arguments have been carefully considered but deemed not persuasive in view of the new references.

Applicants' claims are to a product by process and do not compare the dissolved salt to a non-solvated salt. The use of the dissolved salt is with a water-dispersed polyurethane binder The art teaches the use of a salt as an over coating for an electrophotographic organophotoreceptor as a charge carrier. Among the salts useful as a charge carrier are the Li and Na salts taught by Ferrar note Col 11 lines 40-65. It would be obvious to one

Application/Control Number: 10/657,607 Page 3

Art Unit: 1756

of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the salts as charge carriers as the charge carrier salts as taught in either JP or GB to improve the resistance to migration of the charge carrier.

Claim Rejections - 35 USC § 102

4. Claims 35 & 36 are rejected under 35 U.S.C. 102(a) as being anticipated by Weiss et al. Weiss teaches a charge generating element with an overcoat layer. The overcoat layer can be other than the preferred silsesquioxanes note Col. 5 line 4-10. The salt can be a Li or Na charge carrier salt note table Col. 10- Col. 11 lines 60-65.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John L. Goodrow whose telephone number is 571-272-1384. The examiner can normally be reached on Monday -Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark F. Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
